EVENT SUMMARY

This annual event has been renamed the FEI Career Skills Enhancement Seminar based on survey feedback from our members. It demonstrates the chapter's commitment to enhance your personal and professional growth. If you want to gain skills and knowledge that can be used at your current and/or future employer, this is the event for you!

The primary focus of this year's seminar is big data and data analytics. Hands-on training will also be offered during several of the sessions. FEI Members, strategic partners, and their immediate staff will greatly benefit from this event.

Experience how other professionals are using Microsoft Power BI and Tableau Software to make big data understandable. Also, see LinkedIn in action, and learn advanced Excel features - including Pivot Tables and data cleansing! Attendees are encouraged to bring their own laptop or share theirs with a fellow staff member to maximize the benefits gained from this experience.

Please note: even though the seminar is a full day event, attendees may participate in any/all sessions that are of interest. Lunch will be also be provided.
